With ResearcherID it is possible to make a list of your own articles and find out what your H-index is. To do so, you have to take the following steps:

1. Go to researcherid.com

2. If you already have an account for Web of Science/Web of Knowledge of EndNote web, you can use the same account to login
   if not
   Register for a new account
   - Fill in the form and click on Submit Registration. Walk through the presented steps.
   - You have received a Researcher ID now and are logged in to Researcher ID

3. Now you can update your profile with the various notations of your name, the institutes where you work (and have worked), and other data.

4. Next, you can find and import your articles. There are 3 possibilities:
   - Search in Web of Science Core Collection and import your articles (preferred option)*
   - import your articles using EndNoteWeb
   - import your articles via an upload from a RIS-document

* To be able to calculate your H-index, the preferred option is to download articles from the Web of Science Core Collection. For more information see the e-module about the H-index.
Useful features:

- In Web of Science it is possible to search on ResearcherID.

- Within ResearcherID you can now collect your articles and at once see what your H-index is; via the menu on the left - click on Citation Metrics

- If you want to create a ResearcherID from a pc or laptop outside of the campus and add articles from web of science, you best start from https://ru.idm.oclc.org/login?url=http://www.researcherid.com/

- You can place a link to your ResearcherID public profile on your personal webpage. If you keep your list on ResearcherID up to date, Web of Science will always show the current publication list.
